

POLISHED TO A HIGH-FINISH!

An optimal surface finish, that is adjusted to the material processed, a substantial increase in tool life can be realized. For adhesive materials that require an optimal chip-flow, fine-polished knurling wheels have delivered an improved performance in practice.

FINE-POLISHED KNURLING WHEELS

zeus® knurling wheels are polished in-house with a special technique that allows a highly-precise rounding of the edges and excellent surface smoothing. The precise edge rounding of the tooth flanks enhances the edge stability and prevents built-up edges. Premature breakage of the knurling wheels' teeth can thus be prevented. Moreover, polished knurling wheels are a cost-effective alternative to ground carbide knurling wheels, that are commonly used for adhesive materials.

zeus® Polished: For brilliant achievements!

zeus® *Fine-polished knurling wheels*

- ✓ Smooth tooth flanks
- ✓ Precise edge rounding
- ✓ Excellent surface quality
- ✓ Increased tool life

zeus® POLISHED PRODUCT PROGRAMME

All standard dimensions are available within 24h with a fine-polished finish. A surcharge of € 2,80 is applied per unit.

A fine-polished finish is also available for special dimensions, price and delivery time on demand. (Minimum quantity 10 pcs)
